ITS Announces the Successful Implementation and General Availability of Data Minder

Barcelona, Spain: Integrated Telecom Solutions, Inc. (ITS), a Dallas, Texas, based mobile solutions company, announced today that it has released its Data Minder solution for General Availability. Data Minder has been successfully tested with the GGSN and Prepaid system of a major network equipment provider and implemented by an ITS customer. Data Minder provides operators and their customers the tools to establish policies or rules for the mobile data usage. Data Minder compliments and enhances the ITS Minutes Minder solution which has been deployed by numerous operators to enforce policies for real-time usage control of voice and SMS for both prepaid and postpaid accounts.

“Data Minder is an important addition to our portfolio given the success our customers have had with Minutes Minder” said Arshad Syed, CEO, ITS. “Data Minder is a simple upgrade for existing Minutes Minder customers.”

In a family setting parents use Data Minder to designate a limit to data usage for their children's mobile handset. Below that set limit the phone functions as usual. Then once the limit is reached children are denied access to data services or, alternatively, they can be routed to a prepaid account.

Data Minder also gives business managers control over their employees' mobile phone usage. Managers are able to define maximum limits on the amount of data their employees can use during a defined period of time. These limits are configured for groups or for individual mobile users.

Minutes Minder and Data Minder when used together allow owners of group accounts to establish and enforce real time spending limits across most types of mobile usage - voice, SMS & data.
