Integrated Telecom Solutions Announces the Broadening of its Relationship with Hewlett Packard

Richardson, Texas: Integrated Telecom Solutions, Inc. a wireless applications solutions company, today announced the broadening of its long term relationship with Hewlett Packard (HP) which began with Compaq/Tandem Computers in 1996.

ITS has signed an Independent Software Vendor Agreement with Hewlett Packard for the marketing and distribution of the ITS WINS (Wireless Intelligent Network Solutions) suite.

Through another agreement, the GINS (Global Intelligent Network Services) Master Agreement, signed in November of 2002, HP has transferred the GINS product suite to ITS including future development and on-going support. With the addition of GINS, ITS picks up a number of tier one wireless service providers on four continents as its customers.

As part of the relationship, ITS wireless solutions which run on a number of HP platforms including HP Non-Stop, HP-UX, HP-Alpha, Linux and Windows NT will be sold and supported through HP . The relationship provides Wireless Service Providers with the global presence, strength and stability of HP coupled with the innovative wireless solutions produced by ITS .

"To thrive in this very competitive market you must be coupled to an industry leader with global reach" said Arshad Syed, CEO of ITS. " We are very pleased

that HP has decided to expand our relationship which over the years has included over 100 different projects for wireless service providers around the world".

ITS products fall into three general areas including Mobile Office Solutions, Mobile Consumer Solutions and Prepaid Solutions.

Mobile Office Solutions provide a corporate wireless subscriber many of the same services available to them as if they were in the office. Services include virtual private network, abbreviated dialing and access to corporate information directories. In addition web based provisioning and management functions are provided to allow the corporation to manage their own service and subscribers.

Virtual Caller ID, Wireless Caller Name and Generic Number Translator are part of the Mobile Consumer Solutions . If the subscriber's phone is turned off the Virtual Caller ID application will store the caller ID and send it via a text message when the phone is turned back on . The subscriber now has the number of the caller even if they don't leave a message and the phone was turned off. Wireless Caller Name displays the caller's name along with the number bringing the wireless subscriber parity with land line functionality. Generic Number Translator allows carriers to offer network wide variable length abbreviated dialing such as *22 for weather.

The Prepaid Account Manager is offered as part of Prepaid Solutions. With this solution prepaid subscribers can manage their accounts via the Internet, mobile phone or wireless PDA. Subscribers can view their account balance, their calling history, recharge history and top-up their prepaid accounts using credit cards, vouchers or bank debit. The top up can be on-demand or automated.

Integrated Telecom Solutions, Inc.
2435 N. Central Expressway Suite 1500
Richardson, Texas 75080, USA

All three categories of solutions help the Wireless Service Provider grow revenue, lower operational costs, as well as acquire and retain high value subscribers.
